Bounce Castle Electrical Waiver

The state of Ohio considers bounce houses an amusement ride (1711.50 Ohio Revised Code.) For the safety of all concerned, Canton Chair Rental is committed to following all laws and requirements issued by the Ohio Department of Agriculture regarding the bounce castle.

Ohio Law (1711.531 Ohio Revised Code) states that amusement rides cannot be connected to alternating current (AC) unless they have written certification that the fusible switch, enclosed circuit breaker, or panel board has been approved by a State of Ohio certified electrical inspector or a State of Ohio licensed electrical contractor. ***The law requires a written certification from the event sponsor/facility owner.***

Event sponsors/facility owners (including home owners) should have written certification on hand. If the certification is not available, you should contact your local building authority, or building contractor, or your electrical utility supplier.

Because it is the law, Canton Chair Rental ***does*** notify the Ohio Department of Agriculture of all bounce castle rentals and locations of events (1711.53 Ohio Revised Code.) A representative of the Ohio Department of Agriculture (ODA) may do a site inspection. A written certification should be on site at the time of inspection.

Customer agrees to follow the requirements stated above and as stated on the back of this waiver. Customer will be responsible for any and all fines issued if the requirements are not met.

Therefore, the undersigned agrees that the fusible switch, enclosed circuit breaker or panel board to which the bounce castle(s) will be connected, has been approved by a State of Ohio certified electrical inspector or a State of Ohio licensed electrical contractor.
